4 ECO FRIENDLY TIPS THAT WILL SAVE YOU MONEY

These helpful hacks will help you do your part to reduce your carbon footprint

Global warming has become a hot topic in the news as of late (no pun intended). Wherever you stand on the issue, it doesn't hurt to make changes to your lifestyle to help the planet's future. Not only that, but it can reduce your home budget as well! Here are some helpful tips:

Cook up some savings

There are a variety of ways you can make your cooking process more energy efficient. Using a pressure cooker can reduce the overall cooking time needed by as much as 70%, shaving valuable dollars off your utility bill. When cooking a smaller meal, consider using a toaster oven instead of your conventional electric oven which takes longer to heat up and generally uses more energy.

Bolster the bathroom

A leaky faucet can add a significant amount to your water wastage, with one drip per second wasting more than 18L in one day! Investing in a plumber to fix those leaks (or

watching a YouTube video to DIY) is well worth the reduction to your water meter. And while the expert is there, get them to install a more efficient flush to the toilet and water-saving shower head as well.

Reduce waste

Replace your dependence on one-use disposables like paper towels, plastic bags and cling wrap. Cloth solutions for cleaning and shopping are great reusable options and efficient glass food storage containers can seal much better than cling wrap anyway.

Insulate, Insulate, Insulate

The importance of effective insulation can't be overstated, especially with colder weather approaching. Repair the weather stripping around the doors and windows, and ensure proper insulation around heating ducts. This will cut down on your heating bill and help the planet at the same time.
